Studio 2Pi Architecture

Studio 2Pi Architecture is an architectural practice established in 2009 by its principal architect and managing director Panagiotis (Panos) Papassotiriou.

The practice is concerned with many aspects of the design disciplines. We undertake work that spans between various sectors such as architectural design, interior design, masterplanning, sustainable and bioclimatic applications.

We are driven by the constant and ever-changing architectural philosophies that provide our starting point. We aim to enhance the environment by incorporating specifically designed buildings that correspond to their surroundings socially as well as environmentally.

We believe that through constant discussion amongst the profession and the construction industry as a whole we could establish the necessary measures that could fulfil our role in the modern world. We have to answer questions that go beyond the realm of form and function, questions that will fundamentally affect the future of our planet and our species.

The architectural approach is based on clear principles that define the process:

1. Design excellence achieved through constant philosophical dialogue and pragmatic examples. We aim to design and create buildings that respond to their surroundings, serve the end user and enhance our environment aesthetically, functionally as well as by providing a sustainable future for all.
2. Programmatic and budgetary control is achieved through our project management processes. Our commitment to work towards the common goal with the rest of the design team is paramount in any successful project with the close monitoring and input in all the design stages from concept, planning, construction and finally completion.
